Product Naming Update

To ensure a consistent naming schedule, we are updating some of our product names in the UK from January 2023.

Bauder is pleased to announce as part of its continued commitment to provide a consistent and accurate service, we have undertaken to launch PIM (Product Information Management). PIM is the process of managing data required for the marketing & sale of products.

A major benefit of PIM is it ensures all data provided by Bauder UK is up to date, accurate and consistent. It improves efficiency and will assist us to be Code for Construction Product Information (CCPI) compliant. Being CCPI compliant is likely to be demanded by specifiers and surveyors in the future.

What changes will you notice?

From January 2023 certain product labels will be updated to reflect a European wide consistent name.

You will see these on the labels of our delivered products through the beginning of 2023 as the existing stock with current labels are depleted and the newly named product labels work their way through our stock.

Our website will be updated to reflect the name changes.

We have produced a crib sheet that lists the products with updated names (see attached). This should provide a quick solution if you need to find out what the name change is.

At the time of launch all despatch notes will have a QR code linking to our website with the crib sheet of name changes.

For further information on the revised product naming, please scan this QR code to visit our website.

What won't be changing?

The products themselves remain completely unchanged. The only change refers to the naming of some of the products, not all of them.

The name changes taking place won't affect hot melt or cold liquid applied products/systems.

Article numbers are unchanged for all products.

How will the new naming look?

In essence the new 2023 product name is an alpha numeric acronym of the German name, followed by an English descriptor (which in most cases is simply the 'old' UK name).

Some examples of how the name change will work:

Thermofol Metal will become **BauderPVC VBL 14 metal**

Angle fillets will become **BauderPIR T KL 50 angle fillets**

EGV 3.5 will become **Bauder EGV 35 TF torch on underlayer**

Key points:

- Changes will begin to be implemented as of January 2023. You may receive product on site which has a mix of the old name and new name as we move on stock.
- We have produced a crib sheet that lists the products with updated names (see attached). This should provide a quick solution if you need to find out what the name change is.
- You can still place orders using the old name during transition.
- The shipping document from Bauder will have the new product name with a QR code to link to our website with the crib sheet for referencing new/old names.
- Products are unchanged; only the names of the products affected will be updated.
- Article numbers are unchanged.
- Most changes are for Single Ply accessories & Green Roofing products.

If a Bauder product isn't on the crib list then the name hasn't changed.

If you have any questions please contact your local ATM or the Bauder Technical Dept.
