

Contractor UPDATE

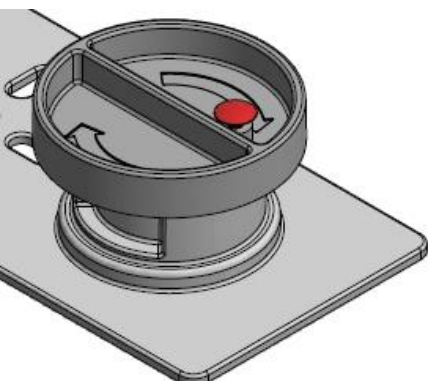

Date: May 2022
No: 202205

Bayonet safety pin location

PV with bayonet cap & locking pin

BauderSolar updated to include bayonet locking cap

As part of our ongoing product improvement process, we are introducing a locking mechanism to the BauderSolar bayonet cap

Why?

We are introducing a locking pin to increase the security of the BauderSolar system. This safety pin prevents the bayonet locking caps from being unclipped by anyone other than skilled operatives. The additional pin will also ensure that installing operatives will always be sure the bayonet cap is correctly installed in the fully locked position.

When does this come into effect?

All new orders from Feb 1st 2022.

What about projects already live on site?

This adaptation is an ongoing improvement process and will not be required on any existing installations.

Does this affect the guarantee?

No

What about pricing?

The additional pin will not affect the product price.

What about literature and documentation?

Installation guidelines have now been updated, a copy of which is included with this update.

If you have any questions, please do not hesitate to contact me.
