

Contractor UPDATE

No: 202212
Date: September 2022

Changes to LiquiTOP Glass Fibre Mat

Due to product availability and usability improvements, we will be changing the roll size of **LiquiTOP Glass Fibre Mat**.

Why are we changing?

As part of our continual product improvement plan, we are changing our glass fibre mat for a new product. The new mat has better wetting out characteristics, which will aid the installation of the glass fibre mat in the LiquiTOP PU first/embedment coat, making this system even more user friendly.

Outline of Changes

The new glass fibre mat has the same mass per surface area of 225 gsm, has one feathered edge and affects neither the in-service performance nor the guarantee of the LiquiTOP systems.

Bauder LiquiTOP Glass Fibre Mat will be supplied in the following format:

- **Mass per Surface Area:** 225 gsm
- **Roll Weight:** 28kg Nett (30kg Gross)
- **Roll Size:** 0.95 x 120m (approx.) - 114m² (approx.) - 3,192m²/Pallet (approx.)

The new roll size will be available from September 2022 and any deliveries after that will be the new product. The two products can be mixed with no difference in finished membrane performance.

It would assist us greatly if, when placing your orders for LiquiTOP projects over the next month or two, you state the roll size for the LiquiTOP Glass Fibre Mat. Our Sales Team will manage the transition of the new product and will clarify the m² being delivered.

The new LiquiTOP Glass Fibre Mat list price is £289.56 per roll (£2.54/m²). The LiquiTOP Price List will not be revised until the next update.

We understand that you may have secured projects based on using the previous product and pricing. In such cases, please discuss the price with your local ATM.

An updated Product Data Sheet is available at www.bauder.co.uk
