KSA DUO 35

KSA DUO 35—change of appearance of top surface

BauderTEC KSA DUO 35 (item number 1602 0000) is currently going through a change to the top surface of the product with a new design.

As a reminder—the current KSA DUO 35, when on site, is not distinguishable from KSA DUO, except for the wrapper and the thickness of the product.

Once you have removed the paper wrapper, the only difference is the thickness of the product. The top surface is the same.

The new top surface design will enable clear distinction between current KSA DUO and KSA DUO 35. Please see image opposite for new top surface design.

The changeover will take place step by step and it is not possible to place a deadline on the exact date it will occur for logistical reasons. Therefore, it may be that a site will be supplied with the same wrapper, but the two different designs.

Any questions, please feel free to contact me.
