

Contractor UPDATE

July 23
No: 202303

Bauder JFRI WFRL Membrane

As a result of our continued system development, and with immediate effect for new orders, our current **Bauder JFRI WFRL membrane** will change to a wider roll, enabling easier on-site installation.

There are no performance, quality or durability differences, and the new width continues to form part of our **JFRI PREMIUM** (EPS) and **BauderGLAS Inverted** (Cellular Glass) Insulation systems.

Bauder Ltd are fully committed to providing you with a technically advanced and commercially sound Hot Melt Waterproofing System solution.

The changes are as follows:

Existing roll size	2.7 x 100m	(270m ²)	Weight 27kg
New roll size	3.0 x 100m	(300m ²)	Weight 30kg

The lead time for the new roll size remains the same.

The current list price per m² also remains the same.

Please feel free to contact me and discuss if you have any questions.
