## New Product Addition

### BauderMINERAL NC 56 Inverted Upstand Board

We are pleased to introduce a new product to our inverted insulation portfolio - **BauderMINERAL NC 56 Inverted Upstand Board**.

#### Product Overview

The BauderMINERAL NC 56 Inverted Upstand Board comprises of 50mm mineral wool with a 6mm fibre cement facing, matching the specification of our existing BauderROCK NC 56mm Upstand Board.

#### Why are we adding this board to our range?

The introduction of this board offers several strategic and operational advantages:

- Supplier alignment - The supplier of the new NC 56mm board also provides our JFRI insulation range. This alignment enables us to streamline procurement and logistics.
- Operational Efficiency - When JFRI is used as the field area insulant and a non-combustible upstand board is required, the NC 56mm board becomes the preferred choice. This allows for combined deliveries reducing:
- Transport costs
- Site disruption
- Time spent by contractors receiving and checking deliveries
- Environmental Benefits - Fewer deliveries results in lower transport mileage contributing to a reduction in CO2 emissions.
- Flexible Ordering - The new board will be available with a reduced minimum order quantity of 36 boards (1 pallet), half the current minimum of 72 boards for our BauderROCK version.

#### What about our existing BauderROCK NC 56mm board?

The BauderMINERAL NC 56 Inverted Upstand Board will become the default in specifications where an inverted non-combustible upstand board is required, replacing the BauderROCK NC 56mm Upstand Board.

**What will the price of the BauderMINERAL NC 56 Inverted Upstand Board be?**

The new 56mm board will be listed at the same price as our existing BauderROCK NC 56mm Upstand Board.

Any questions, please feel free to contact me.
