

Contractor UPDATE

July 2023
No: 202306

Bauder Sealant - change of formulation

As part of our continuous product improvement programme we will be changing the formulation of Bauder Sealant with immediate effect. The new product cures more quickly and has a slightly firmer feel when fully cured.

Supporting literature, packaging etc.

As the new formulation will be a replacement for the old, the article number will remain the same. The labelling will be different on the new cartridges to include the relevant updated H&S information.

Revised Technical and Safety Data Sheets accompany this update and will be available on the Bauder website.

Packaging will be unchanged with each boxed kit containing 25 x 380ml cartridges and nozzles and 1 x 500ml tin of primer. There is no change to the primer supplied.

Pricing

The price of the new formulation product is the same as the old.

How to tell the difference between the old and new product

The old product is “low modulus” and labelled as such, whereas the new product is labelled “high modulus”.

Can a mixture of the old and new products be used on the same project?

Although both old and new products are grey in colour, the new version is slightly darker so they should not be mixed on the same project for aesthetic reasons.

Please feel free to contact me and discuss if you have any questions.
