

Contractor UPDATE

Date: September 2021
No: 202109

Changes to Bauder Inverted Upstand Insulation

Discontinuation of Bauder JFRI Upstand

We have been informed by our supplier that they have taken the decision to discontinue the manufacture of our **JFRI Upstand Board**. This means that we will no longer be able to sell it as part of our portfolio and anticipate that remaining stocks will last until the end of September.

Outline of changes to Bauder Inverted Upstand Insulation options due to the withdrawal of JFRI Upstand Insulation.

We currently have the following 5 standard options for Inverted Roof Upstands to choose from:

1. **Bauder JFRI Upstand Board (Polystyrene)**
2. **BauderROCK NC Upstand Board (Dense Mineral Wool Slab)**
3. **Bauder XPS Upstand Board (Polystyrene)**
4. **BauderGLAS Upstand Board (Cellular Glass)**
5. **Bauder Warm Roof Upstand (Combustible and Non-Combustible Options)**

Due to reasons, outlined above and below, we are being forced to change our **Polystyrene Inverted Upstand Insulation** offer to the market.

Changes to Bauder Upstand Insulation Specification and Sales

As mentioned above, we have been advised by our supplier that they have discontinued manufacturing our **Bauder JFRI Upstand Board**.

Remaining stocks of **Bauder JFRI Upstand Board** are limited and once they have gone there will unfortunately be no more.

As a consequence of the removal of this product from our portfolio, all future orders requiring a polystyrene based upstand board will be fulfilled using our **Bauder XPS Upstand Board**. PDS can be found at <https://www.bauder.co.uk/technical-centre/products/insulation-products/bauder-xps-upstand-insulation>

All Bauder specifications already in our system incorporating **Bauder JFRI Upstand Board** will be replaced by our **Bauder XPS Upstand Board**.

Technically there is little difference between the two boards, but there is a variation with the aesthetic finish as our **Bauder JFRI Upstand Board** has a GRP facing and our **Bauder XPS Upstand Board** has a CP board facing.

If this causes issues, please contact either myself or your **Bauder ATM** for further information.

Contractor Update cont...

There will be no cost penalty for this change on existing priced projects.

If a non-combustible upstand board is required we suggest that you check out our **BauderROCK NC Upstand Board**, PDS available at <https://www.bauder.co.uk/technical-centre/products/insulation-products/bauderrock-nc-56mm-upstand-insulation>

Hopefully the above has covered off most of the questions that you may have. In the event that it hasn't please feel free to get in touch.
