Bauder capping sheets – Removal of Grey Slate mineral colour option

To streamline our product portfolio Grey Slate mineral used on K5K, K4E & KSO SN will no longer be an option to be specified due to Charcoal Grey being the specifiers preferred choice.

When does this come into effect?

With immediate effect, the option to specify will no longer be available.

What about projects already live on site?

Please contact your local Area Technical Manager.

What about projects with a specification written?

Where Grey Slate has been specified, this will be substituted with Charcoal Grey.

If there is a project on a previous phase where the client wants to match in the colour, we can place a special order which will be full pallets only on a longer lead time than standard deliveries.

Again, please speak to your local Area Technical Manager for further information.

What about literature and documentation?

The current literature will be archived, and the website will be updated.

If you have any questions, please do not hesitate to contact me.
