

Contractor UPDATE

Date: December 22
No:202217

Changes to Bauder Flow Restrictors

Following the successful launch of BauderBLUE ST adjustable flow restrictors in August, older specifications with the older SR Blue roof flow restrictors will, from January 2023 be recalculated for the new ST adjustable flow restrictor.

Outline of changes:

Our new BauderBLUE ST adjustable flow restrictors allow the flow rate of the flow restrictor to be adjusted and set on site. The ST products also have the added advantage of have a wider range of flow rates, potentially reducing the number of outlets required.

This change allows us to hold stock of the adjustable flow restrictor, greatly reducing lead times.

Blue roof calculations from August 2022 have been carried out using the BauderBLUE ST adjustable flow restrictor. From January 2023 projects where the older SR flow restrictors were used for the blue roof calculations will be recalculated with the new ST adjustable flow restrictor.

General Guidance:

Contractors will still be able to purchase the old blue roof flow restrictor (BauderBLUE SR) for specifications produced prior to the change over where the ST adjustable flow restrictors can not achieve the required flow rate.

The product is supplied in two forms; the BauderBLUE ST-B for Bituminous Systems and BauderBLUE ST-HM for Hot Melt systems.

For more information see Bauder's revised Blue Roof Design Consideration brochure on the website: <https://www.bauder.co.uk/technical-centre/design-considerations/blue-roof-design-considerations> .
