

Contractor UPDATE

Date: January 2024
No: 202401

Changes to BauderSOLAR pricing & electrical contractor schedule of rates

In partnership with our national framework of partner electrical contractors we are launching an updated pricing schedule that includes electrical items such as inverters within the pricing schedule

Why?

In order to streamline processes, ensure our offering is competitive and meet relevant standards Bauder will no longer quote or supply Solar PV electrical items such as inverters and cabling. These elements, along with electrical design, will be included in the attached updated schedule of rates and will be supplied by our electrical partners.

When does this come into effect?

All new orders from February 1st 2024.

What about projects already ordered?

We will facilitate any existing orders.

What does this mean for electrical design?

As solar PV systems become larger and more complex it is vital to ensure that we continue deliver the highest levels of quality and support for our roofing contractor network.

Bauder will continue to produce roof layouts, windload calculations and generation projections but our electrical contractor partners will now undertake and supply:

- Electrical design & surveys
- G98 & G99 grid applications
- Supply of electrical items such as inverters and cabling

What will Bauder include in our quotations?

From February 1st 2024 we will price for BauderSOLAR F, BauderSOLAR F XL and BauderSOLAR G LIGHT mounting systems, along with specified solar panels only.

Will this affect your pricing?

No. In all trial schemes, the change in pricing ensured the overall price to client was more competitive.

If you have any questions, please do not hesitate to contact me.
