

CONTRACTOR UPDATE

Hot Melt Blue Roof Outlet and Hot Melt Compact Outlet Reinforcement Modification Notification

As a result of our continued system development we have taken a small step to improve the installation capabilities of the above outlets.

Outlets concerned are:

GB60267080 Hot Melt Compact Outlet 70mm (DN70) with Clamping Ring (Blue Roof)

GB60268100 Hot Melt Compact Outlet 100mm (DN100) with Clamping Ring

Part codes for each item remain the same.

Within the previous box there were two circular EPDM Reinforcement rings, one large and one small.

The small ring will remain as a component supplied with the outlet. It is inserted prior to the outlet being seated into the deck, in this case concrete (if required), and is designed to protect the outlet from any deck imperfections that may exist.

Due to our constant product evaluation, it was felt that the large circular ring needed to be redesigned. The reason for this was that it was felt that the shape and the size of the larger ring (320mm diameter), made it difficult to sufficiently bond the **Polyester Reinforcement** used in the field area to it.

We are changing the larger reinforcement ring for a square version.

The new square version measures **495 x 495mm** and will give the operatives a larger and easier bonding surface for the field area **Polyester Reinforcement**.

Technical

- The Product Data Sheet has been updated to confirm when and where this should be used.
- The specification clauses amended to reflect this change.

When does the change take place?

All deliveries will now include the new EPDM reinforcement within the box.

Both products will have a new, slightly higher list price to reflect the improvement, effective as of **18th December 2019**.

Hot Melt Compact Outlet 70mm (DN70) Was **£103.97**, now **£111.83**

Hot Melt Compact Outlet 100mm (DN100) Was **£109.52**, now **£117.80**

These 2 items will be amended in the **Hot Melt Price List** that supersedes the current **Hot Melt Price List October 2019**.
